

Accumulate/Distribute Volume Screener

This screener finds stocks where the buying volume exceeds the selling volume.

Volume Calculation Method

Is the volume on a particular day attributed to the buyers or the sellers? There are two methods which you can choose from. Various charting packages color the volume bar red or green accordingly, or sometime by some inscrutable logic. You can either:

- Compare today's closing price to today's opening price.
- Compare today's closing price to yesterday's closing price.
